

Planet Earth has one moon.  
Some planets have many!

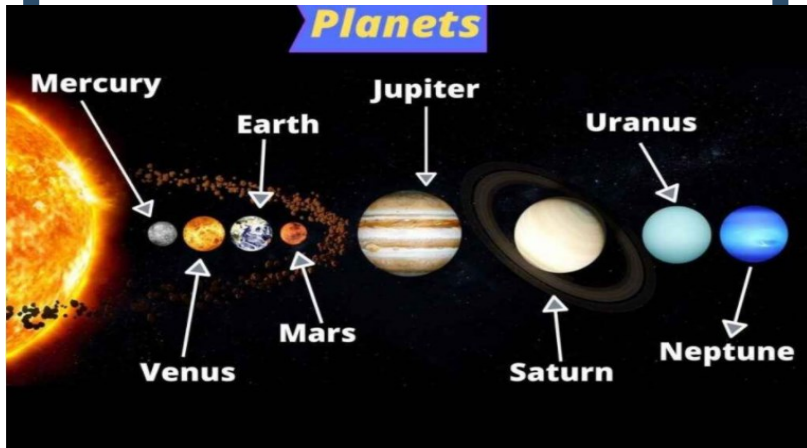

All the planets orbit the sun, which is in the middle of our solar system.

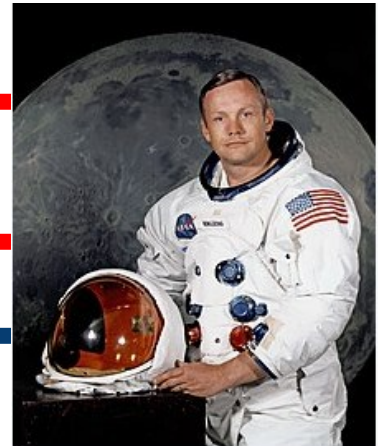

The planets are all different sizes, temperatures and have different surfaces.

The sun is a large star, a massive ball of hot gas that gives off light and heat. It lives in the middle of our solar system.

Neil Armstrong was the first Astronaut to walk on the moon.

Astronauts explore space and the moon, they travel there in a rocket.
