

# How Do They Grow?

There are living and non-living things in the world.

## Living Non-Living

We are living things.

Non-living things have no life in them, such as a rock, bucket and water.

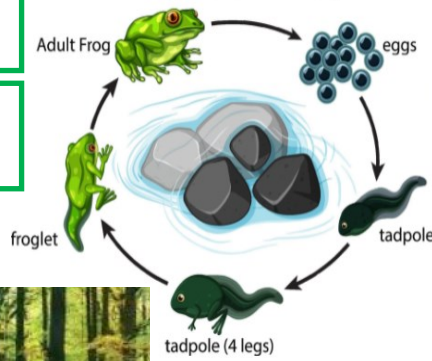

All animal species go through life cycles and have their own offspring.

A life cycle has four stages which are birth, growth, reproduction and death.

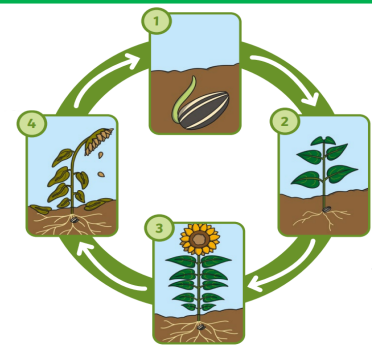

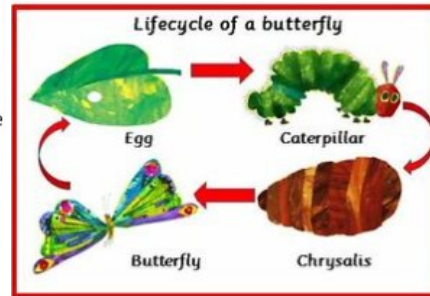

Humans, animals and plants are living things and live in habitats.

### Life Cycle of a Frog

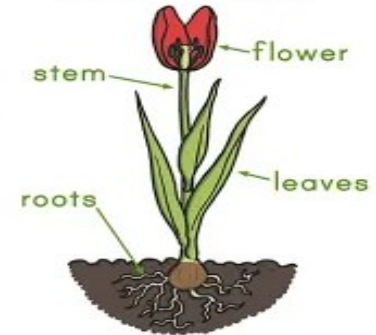

Plants have a life cycle.

That we explore the world around us with our 5

### Parts of a Plant

A living thing grows, reproduces, feeds, needs air and gets rid of waste.

Changes occur in the natural world over time and we can observe these changes.

We should care and show respect for the living things in the world around us at all times.
